MULTI ROOM

LARNITECH

www.larnitech.de

● MULTIROOM™

The Multiroom™ system allows holding a centralized control of the audio- and video signals in the home; furthermore, different records can be played in different rooms, e.g., classical music in the study, jazz in the bar and a music fairytale in the children's room. You can easily control the Multiroom™ system from your tablet/smartphone or using your wall panel from any room of the house.

● FLEXIBLE STRUCTURE

The main element of the Multiroom™ system is a so-called media point. The media point is a compact device with a built-in amplifier; the device is connected to the local network. Using the network structure allows easily expanding and augmenting the system; for this purpose it is necessary to add a new media point. Smart House will automatically detect a newly connected device, and after that it will be ready to operate.

● VOICE NOTIFICATIONS

The Multiroom™ application is integrated into the Larnitech Smart House system which also allows using it in different scenarios. For example, the system can notify of a door intercom call, the actuation of the security system or of a water leakage.

● SUPPORT OF THE DLNA STANDARD AND OF THE INTERNET-RADIO PROTOCOL

The system supports the DLNA technology which allows it to interact with other devices supporting this standard. The Multiroom™ system can playback the content stored on your smartphone, computer or at the home NAS storage (Network Attached Storage). Also, the Multiroom™ system can play the Internet radio stations live streams.

● ENTRANCE DOOR INTERCOM

The entrance door intercom system allows displaying notifications in the rooms where the Multiroom™ system is installed. The notifications can sound both in separate rooms and in all the rooms simultaneously.

● TRACKING SOUND

Thanks to the installed motion detectors, the system reacts to the listener's location and automatically turns the sound on as it detects the listener nearby, turning it off inside the "empty" areas.

● VOICE ASSISTANT

Smart House communicates with the owner using the Multiroom™ system. The Assistant can report on the weather forecasts or inform you of the planned activities for today; it can also inform you of the important events.

● ON-DOOR SPEAKERPHONE

The speakerphone is integrated into the Smart House system; the ring signal is relayed to any point of the house through the Multiroom™ system; the video stream is displayed on the tablet device, on the phone or television set; meanwhile, the owner can talk to the guest and choose whether to admit him/her to the house or not.

● SOUND-AND-LIGHT SHOW

The Multiroom™ system can interact with the RGB-illumination changing colour and brightness of the light based on the played music.
